

Miles Rizzo | Gameplay Programmer

milesrizzo.com ■ miles.t.rizzo@gmail.com ■ (615) 715-7728

Skills

Languages and Interfaces

C++, C#, Lua, OpenGL4.2,
GLSL, ImGui, JSON, XML, Qt

Commercial Engines

Unity, Unreal, Godot

Software

Visual Studio, Git, Perforce,
Jira, Photoshop, Blender

Strengths

Procedural Generation
System Design
Tools Design
User Interface
2D and 3D Math
Data-Driven Development
Optimization

Education

Masters of Interactive Technology, Programming Specialization

The Guildhall at Southern
Methodist University
2017-2019

Bachelor of Arts, Computer Science

Oberlin College
2012 - 2016

Professional Experience

World Experience Engineer, Amazon Game Studios

New World: Aeternum - MMORPG | C++, Lua | June 2021 - January 2026

- **World Experience**

- Implemented major storage updates to give players much-requested quality of life improvements for crafting and house decoration
- Supported large-scale world changes by engineering solutions related to player inventory, housing, and activities
- Developed features such as camp cosmetics and permanent camping structures for our player-built camp system
- Implemented UI for gameplay features and the player activity hub

- **Quests and Quest Tools**

- Engineered new quest technology to allow designers to implement repeatable quests and seasonal content
- Developed new features and identified friction points with our internal quest tool to help designers quickly integrate the tool into their workflow
- Created in-game tooling to easily adjust dialogue camera settings

- **Housing**

- Improved system infrastructure to better support live-service debugging
- Developed improvements to decoration and scoring systems

Contract Gameplay Engineer, Microsoft

Minecraft, Minecraft: Earth - Sandbox Game | C++ | May 2019 - Feb 2021

- **Mobs** - Modernized existing creatures in Minecraft: Bedrock Edition and added new technology to allow designers to rapidly create new data-driven creature variants
- **Character Creator** - Implemented player logic and UI for the new character creator in both Minecraft: Bedrock Edition and Minecraft: Earth, and investigated new rendering technology for requested features

Projects

Personal Game Engine

C++ and OpenGL4.2 | 2017-2019

- Personal development engine written from scratch, which supports 2D and 3D rendering framework, model importing, particle systems, lighting, UI systems, profiling tools, and more

La Rana

Single-player exploration game | Unreal Engine | C++, Blueprint | 2018

- Sprint planned and negotiated deliverables for software development team
- Managed build pipelines and implemented in-game UI, menus, and VFX
